

BACHMANN PLUS

EMD F7 A AND B

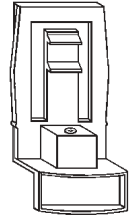

#452 CONVERSION KIT

The #452 Coupler Conversion Kit is specifically designed for Bachmann F-7 A and B units and contains special Kadee® Conversion Brackets, #35 Couplers for one unit and complete instructions with illustrations.

Two options for coupler mounting are possible with the #452 Kit: One option allows for 5 foot spacing between locomotives and requires the least amount of alterations. The other option is the 3 foot, prototypically correct, spacing between locomotives. This option requires additional truck alterations.

#452 Kit Instructions and Illustrations are not repeated here, please see Kit.

See #452 Kit for complete instructions and illustrations
