**BACHMANN****2-8-2 K-27**

**#900, coupler only from the 906 or 830, or 916 'G' Scale for both ends**  
**#1916 #1 scale for both ends**

The K-27 will use our newer #900 or the coupler only out of the #906 or original #830 coupler packages. These couplers will fit right into the Bachmann draft gear boxes.

The other option is you can take the Bachmann coupler head off the shank (arm) our G-scale #916 or #1 scale #1916 is a direct replacement and fits just like the Bachmann coupler.

Be sure to check the coupler heights because Bachmann, as well as certain other manufacturers, are not too concerned about consistent coupler heights.
