

Setup

- 1 Install two AA Batteries in Transmitter. *Display will show that the System is OFF.*
- 2 Connect Wire Harness to Receiver. *Do not force connector.*
- 3 Connect Servo to Wire Harness. *Match up yellow, red and black wires.*
- 4 Install four AA batteries into Receiver Battery Pack.

Note: Do not connect the Receiver Battery pack to the Wire Harness at this time.

Wake System

Press **and hold** the  key for at least three seconds.
Transmitter will turn on and search for receivers. Display shows that the System is Ready.

Note: If the Display turns off, press any key to turn the display on.

Binding Receiver to Transmitter

- 5 Press **and hold** the  Key for one second. *Display will show “SEL”, then: press and release the  Key. Display will show “bnd”.*

Note: The next sequence must be completed within 10 seconds. *

- 6 Plug the Battery Pack into the Wire Harness and press the  key.

Note: Write down the address shown in the Transmitter Display.
This address will be needed for future communication with this Receiver.

Transmitter and Receiver are now bound & ready to use.
Press  to operate the servo.

See User Guide “Getting Started” for more information on using the Kadee® Radio Control and it’s features.

Note: After one hour of no activity receivers will go to sleep.

To wake Receivers: Press **and hold** the  Key for one second. *Display will show “SEL”, then: press and release the  Key.*

** If the  Key is not pressed within 10 seconds from applying power to the Receiver, the Binding process will fail.
Remove power from the Receiver and return to **Binding Receiver to Transmitter** Step 5.
